

OSINT Runbook Builder

Turns one research question into bounded, scheduled public-source checks.

PROCESSING BOUNDARY

The query goes through a server proxy

PURPOSE OF THE SITE

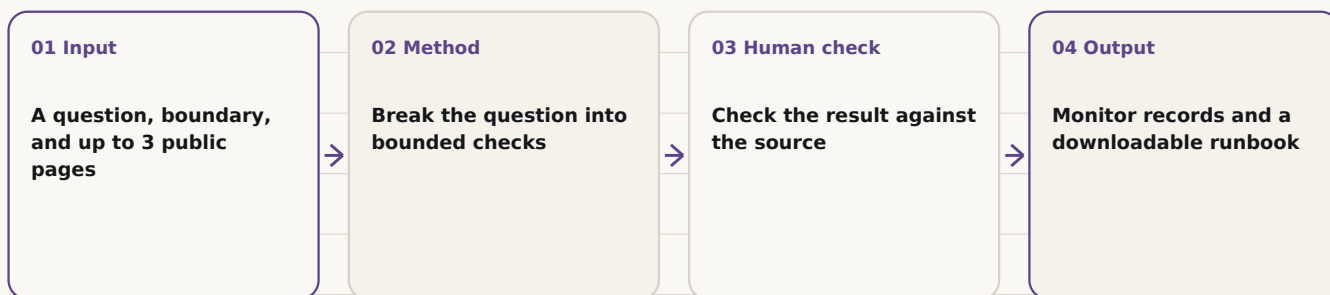

This site exists to turn one question into a safe, repeatable research process. A tool result is not a verdict; the source and the human check stay visible.

WHY DID I BUILD IT?

I built this runbook builder to stop public-source research from spreading across dozens of tabs before the question, boundary, and time are written down.

SMALL ARCHITECTURE

Four parts from input to a record you can keep

OSINT Runbook Builder

USE IT STEP BY STEP

Step 1

Prepare the material

Start with: A question, boundary, and up to 3 public pages

Step 2

Break the question into bounded checks

Turns one research question into bounded, scheduled public-source checks.

Step 3

Check the result against the source

Confirm that every check serves the original question and uses only public, permitted sources. Open a separate runbook for a new question.

Step 4

Download and keep the record

Keep this at the end: Monitor records and a downloadable runbook

HONEST BOUNDARY

A runbook organizes research but does not validate the conclusion. It does not access private accounts and should not be used for out-of-scope people tracking.
