

n8n Workflow Change Review

Compares security and handoff changes between an accepted baseline and release candidate without uploading the workflow files.

PROCESSING BOUNDARY

Runs locally in your browser

PURPOSE OF THE SITE

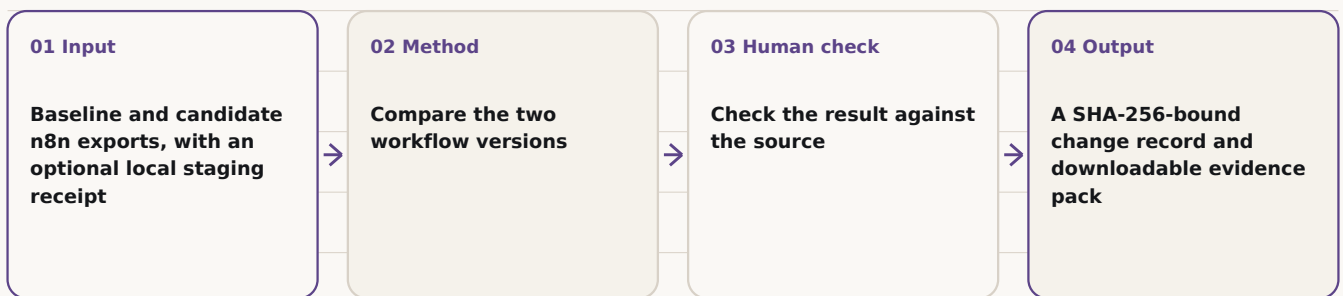

This site exists to turn one question into a safe, repeatable research process. A tool result is not a verdict; the source and the human check stay visible.

WHY DID I BUILD IT?

I built this after seeing small workflow edits introduce a new domain, credential type, or quiet connection during client handoff.

SMALL ARCHITECTURE

Four parts from input to a record you can keep

n8n Workflow Change Review

USE IT STEP BY STEP

Step 1

Prepare the material

Start with: Baseline and candidate n8n exports, with an optional local staging receipt

Step 2

Compare the two workflow versions

Compares security and handoff changes between an accepted baseline and release candidate without uploading the workflow files.

Step 3

Check the result against the source

Compare each changed node with the actual delivery requirement. Verify the candidate field before treating an automated warning as a blocker.

Step 4

Download and keep the record

Keep this at the end: A SHA-256-bound change record and downloadable evidence pack

HONEST BOUNDARY

This tool shows changes. It does not repair the workflow, test production, or guarantee a safe release.
