CTI panel

Brings CVE, IOC, and ransomware feeds onto one screen.

PROCESSING BOUNDARY
Reads public open-source feeds

PURPOSE OF THE SITE

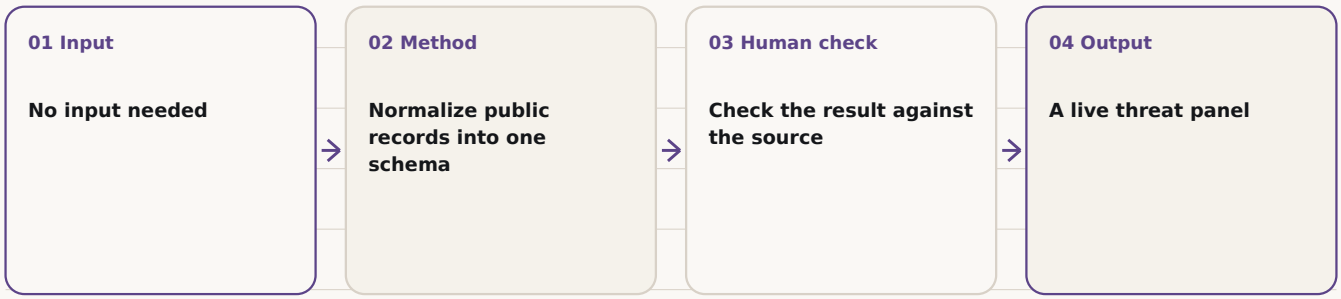
This site exists to turn one question into a safe, repeatable research process. A tool result is not a verdict; the source and the human check stay visible.

WHY DID I BUILD IT?

I built this desk to sort large threat feeds without losing the source, time, and explicit observable behind each record.

SMALL ARCHITECTURE

Four parts from input to a record you can keep



CTI panel

USE IT STEP BY STEP

Step 1

Prepare the material

Start with: No input needed

Step 2

Normalize public records into one schema

Brings CVE, IOC, and ransomware feeds onto one screen.

Step 3

Check the result against the source

Verify a high-priority record at its original source and assess relevance to your own environment separately. A score is not a final risk decision.

Step 4

Download and keep the record

Keep this at the end: A live threat panel

HONEST BOUNDARY

The desk summarizes published public records only. It does not provide attribution, final risk, or an automatic response decision.
