

Version comparison

Shows the structural differences between two versions of a file.

PROCESSING BOUNDARY

Runs locally in your browser

PURPOSE OF THE SITE

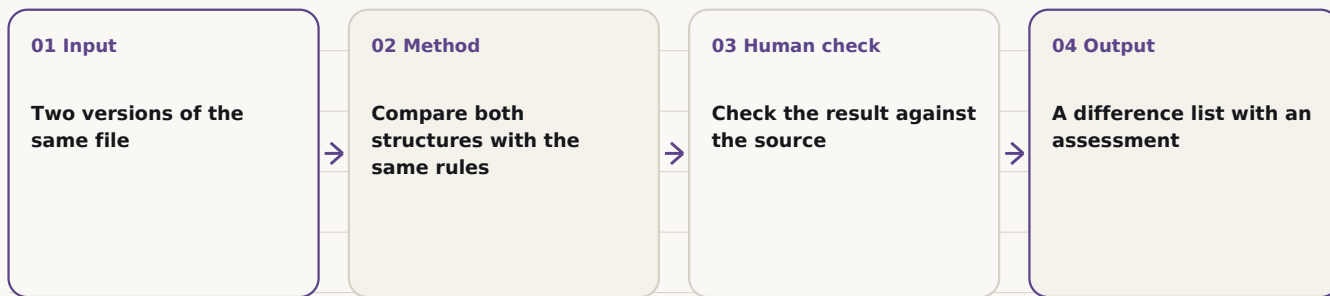

This site exists to turn one question into a safe, repeatable research process. A tool result is not a verdict; the source and the human check stay visible.

WHY DID I BUILD IT?

I built this so a reviewer can see which structures changed between two files instead of stopping at a different hash.

SMALL ARCHITECTURE

Four parts from input to a record you can keep

Version comparison

USE IT STEP BY STEP

Step 1

Prepare the material

Start with: Two versions of the same file

Step 2

Compare both structures with the same rules

Shows the structural differences between two versions of a file.

Step 3

Check the result against the source

Check whether a changed field is packaging noise, an expected feature, or an unexplained addition by using the release source.

Step 4

Download and keep the record

Keep this at the end: A difference list with an assessment

HONEST BOUNDARY

A structural difference is not a vulnerability by itself. The tool does not run either version or know the intent of a change.
