

File and document sandbox

Builds an identity, structure, embedded link, and IOC report from one file.

PROCESSING BOUNDARY

Runs locally in your browser

PURPOSE OF THE SITE

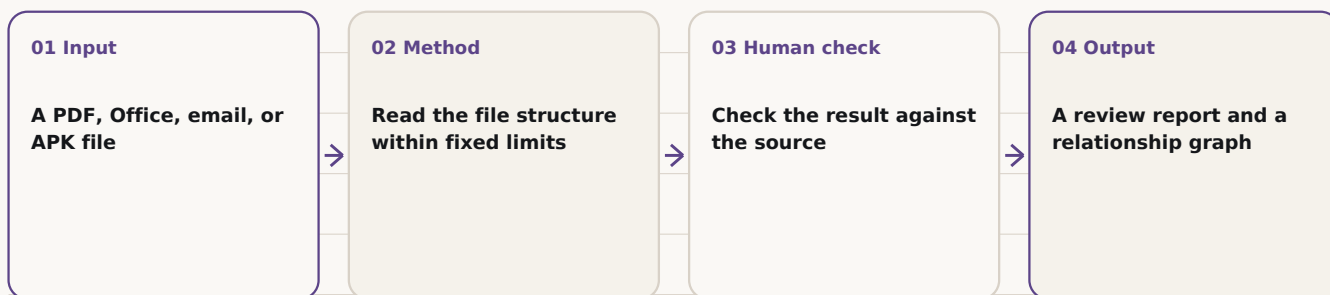

This site exists to turn one question into a safe, repeatable research process. A tool result is not a verdict; the source and the human check stay visible.

WHY DID I BUILD IT?

I built this local desk to identify an unknown file without running it, separate explicit observables, and leave a repeatable record.

SMALL ARCHITECTURE

Four parts from input to a record you can keep

File and document sandbox

USE IT STEP BY STEP

Step 1

Prepare the material

Start with: A PDF, Office, email, or APK file

Step 2

Read the file structure within fixed limits

Builds an identity, structure, embedded link, and IOC report from one file.

Step 3

Check the result against the source

Review a URL, hash, or string together with its location in the file. One string is not proof of maliciousness.

Step 4

Download and keep the record

Keep this at the end: A review report and a relationship graph

HONEST BOUNDARY

The file is not executed. A local static report is not behavioural analysis, an antivirus verdict, or a clean-file guarantee.
