

Internet visibility

Summarises how your own assets look from the internet, passively.

PROCESSING BOUNDARY

The query goes through a server proxy

PURPOSE OF THE SITE

This site exists to turn one question into a safe, repeatable research process. A tool result is not a verdict; the source and the human check stay visible.

WHY DID I BUILD IT?

I built this to collect the basic public surface of an owned domain or IP without probing it like an attacker.

SMALL ARCHITECTURE

Four parts from input to a record you can keep

Internet visibility

USE IT STEP BY STEP

Step 1

Prepare the material

Start with: A domain or IP you own

Step 2

Collect passive records in one view

Summarises how your own assets look from the internet, passively.

Step 3

Check the result against the source

Confirm ownership of each host or service against your inventory. Do not treat old DNS or search records as active assets.

Step 4

Download and keep the record

Keep this at the end: A passive visibility summary

HONEST BOUNDARY

This is a passive snapshot. It does not scan services and is not a complete asset inventory or security assessment.
