Ransomware tracking

Follows the public announcements of ransomware groups.

PROCESSING BOUNDARY
Reads public open-source feeds

PURPOSE OF THE SITE

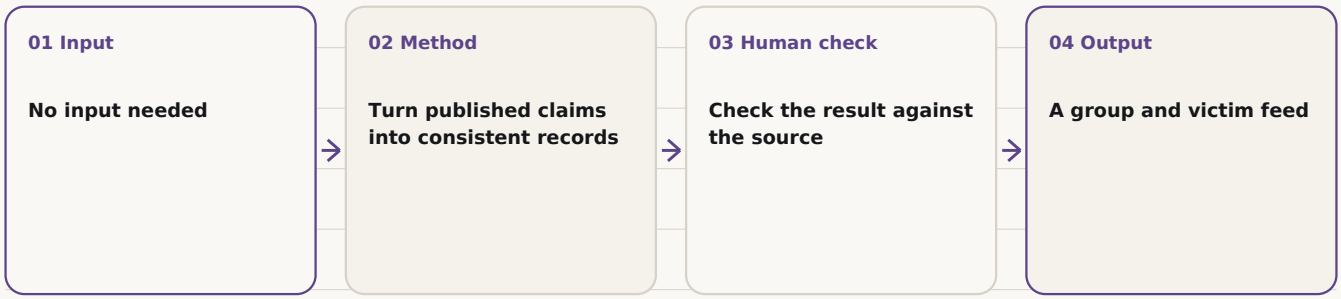
This site exists to turn one question into a safe, repeatable research process. A tool result is not a verdict; the source and the human check stay visible.

WHY DID I BUILD IT?

I built this to track ransomware claims as group, alleged victim, date, and source instead of repeating news headlines.

SMALL ARCHITECTURE

Four parts from input to a record you can keep



Ransomware tracking

USE IT STEP BY STEP

Step 1

Prepare the material

Start with: No input needed

Step 2

Turn published claims into consistent records

Follows the public announcements of ransomware groups.

Step 3

Check the result against the source

Check the victim name and date at the original source. A group post is not proof of a confirmed breach or data leak.

Step 4

Download and keep the record

Keep this at the end: A group and victim feed

HONEST BOUNDARY

The records are public claims. They do not independently verify the victim, access, amount of data, or attacker attribution.
