

Redirect chain

Shows every hop a URL takes before it lands.

PROCESSING BOUNDARY

The query goes through a server proxy

PURPOSE OF THE SITE

This site exists to turn one question into a safe, repeatable research process. A tool result is not a verdict; the source and the human check stay visible.

WHY DID I BUILD IT?

I built this to show where a short or suspicious link goes and every address it passes on the way.

SMALL ARCHITECTURE

Four parts from input to a record you can keep

Redirect chain

USE IT STEP BY STEP

Step 1

Prepare the material

Start with: A URL

Step 2

Follow each redirect in order

Shows every hop a URL takes before it lands.

Step 3

Check the result against the source

Check the domain, status code, and final target at each hop. The chain may change by time, country, or user agent.

Step 4

Download and keep the record

Keep this at the end: A step-by-step redirect list

HONEST BOUNDARY

The result is one query at one moment. It does not prove that the target is safe or that every visitor receives the same path.
