

Source changes

Records changes across monitored sources.

PROCESSING BOUNDARY

Reads public open-source feeds

PURPOSE OF THE SITE

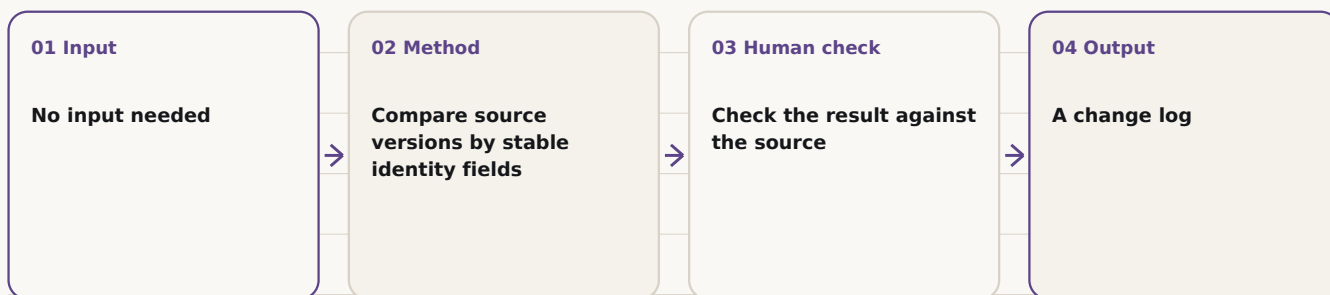

This site exists to turn one question into a safe, repeatable research process. A tool result is not a verdict; the source and the human check stay visible.

WHY DID I BUILD IT?

I built this so additions, corrections, and quiet removals in watched public sources do not disappear inside the daily feed.

SMALL ARCHITECTURE

Four parts from input to a record you can keep

Source changes

USE IT STEP BY STEP

Step 1

Prepare the material

Start with: No input needed

Step 2

Compare source versions by stable identity fields

Records changes across monitored sources.

Step 3

Check the result against the source

Open the change at the original source and look for a publisher correction note. Do not treat ordering or formatting changes as content changes.

Step 4

Download and keep the record

Keep this at the end: A change log

HONEST BOUNDARY

Only watched sources and available versions are compared. The tool does not determine why a source changed or whether removed text was correct.
