

Web change monitor

Compares what changed between versions of a page.

PROCESSING BOUNDARY

The query goes through a server proxy

PURPOSE OF THE SITE

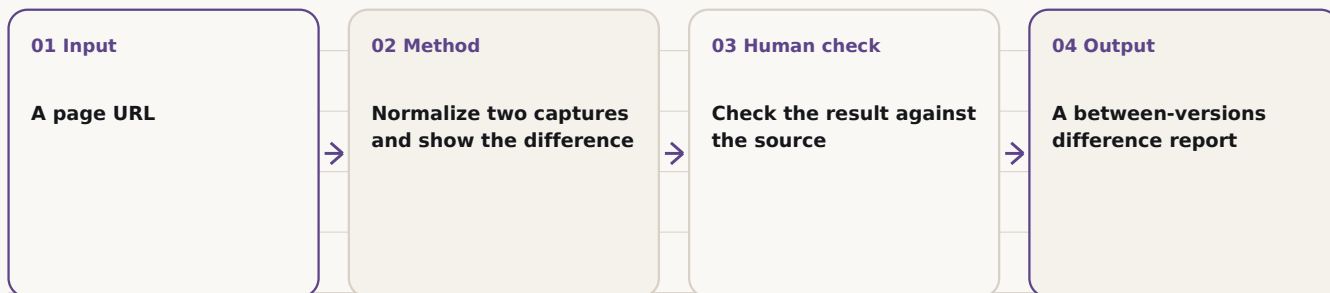

This site exists to turn one question into a safe, repeatable research process. A tool result is not a verdict; the source and the human check stay visible.

WHY DID I BUILD IT?

I built this comparison to separate a page changed alert from the useful question of what text or structure actually changed.

SMALL ARCHITECTURE

Four parts from input to a record you can keep

Web change monitor

USE IT STEP BY STEP

Step 1

Prepare the material

Start with: A page URL

Step 2

Normalize two captures and show the difference

Compares what changed between versions of a page.

Step 3

Check the result against the source

Check whether a difference is real content or a changing date, counter, or other temporary element. Do not record noise as a finding.

Step 4

Download and keep the record

Keep this at the end: A between-versions difference report

HONEST BOUNDARY

The tool compares only the two available captures. It cannot show a change that happened and was reverted between them.
