

Web supply chain review

Lists the third-party dependencies a page loads.

PROCESSING BOUNDARY

The query goes through a server proxy

PURPOSE OF THE SITE

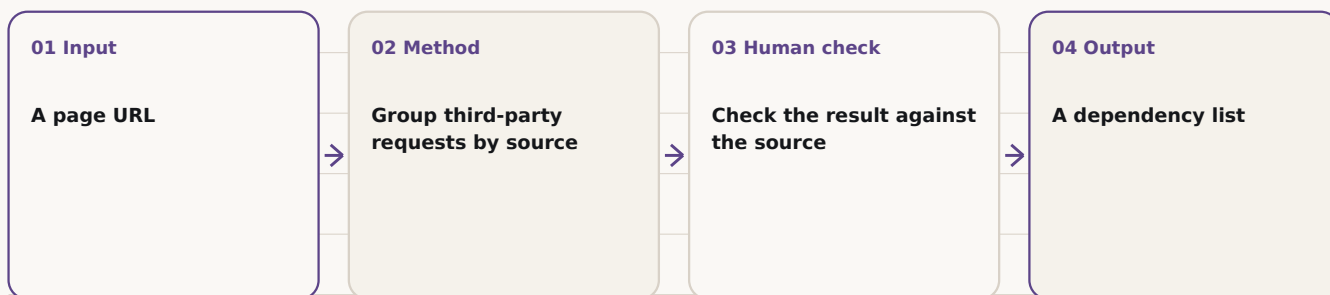

This site exists to turn one question into a safe, repeatable research process. A tool result is not a verdict; the source and the human check stay visible.

WHY DID I BUILD IT?

I built this inventory to show which scripts, fonts, and services a page relies on outside its own domain.

SMALL ARCHITECTURE

Four parts from input to a record you can keep

Web supply chain review

USE IT STEP BY STEP

Step 1

Prepare the material

Start with: A page URL

Step 2

Group third-party requests by source

Lists the third-party dependencies a page loads.

Step 3

Check the result against the source

Compare each domain with the page function and privacy notice. Being third party does not make a dependency risky by itself.

Step 4

Download and keep the record

Keep this at the end: A dependency list

HONEST BOUNDARY

The review shows one page load. Sessions, region, consent choices, or later user actions may load different dependencies.
